

Understanding Insecticide Fly Tags

The consequences of out-of-control insects on your livestock are numerous. Cattle fight flies instead of grazing which interferes with feed intake. Bulls may be hindered from breeding. Cows may lose weight during lactation while milk production and calf weaning weights may be reduced. The good news is there are products to help ease the frustration. Insecticides ear tags may be the answer. This chart shows many of the ear tags available and which insects they protect against. You can get your insects, and the frustration, under control.

The Importance of Insecticide Rotation

1. Y-TEX has the only 4-way rotation to reduce or eliminate the development of resistance to a single class of insecticide.
2. Horn fly resistance to one insecticide class tends to drop while the other insecticide class is in use.
